

## Project Challenges – Egypt Nexus

---

Working on **the National Authority for Tunnels** project comes with unique opportunities, but also some challenges that we expect to face as a team:

### 1. ***Finding the right information***

It's not always easy to get clear, updated details about all the transportation projects (metro, monorail, high-speed rail, etc.), so collecting accurate resources will take extra effort.

### 2. ***Turning complexity into simplicity***

The field of infrastructure and transportation is very technical. Our challenge is to take this complexity and translate it into visuals that are easy for everyone to understand.

### 3. ***Keeping the official tone while being creative***

Since we're designing for a government authority, we need to keep a formal, trustworthy identity but at the same time, make our designs modern and attractive.

### 4. ***Explaining the benefits clearly***

Many people don't realize how much these projects help reduce traffic and pollution. One of our main challenges is showing these positive impacts in a simple and visual way.

### 5. ***Working as one team***

We're all designers at the same level, so we need to divide tasks fairly, make sure our styles stay consistent, and support each other through the whole process.

### 6. ***Designing for everyone***

Our audience is very diverse: from daily commuters and students to families and tourists. Making designs that connect with all these groups won't be easy.

### 7. ***Time pressure***

We have a lot of deliverables to create in a limited time. Managing our schedule and keeping the quality high will be a big test for us.

### 8. ***Visualizing data***

Numbers like "pollution reduction" or "project phases" aren't always easy to show. Turning them into attractive visuals is another challenge we'll face.

### 9. ***Introducing new technology***

The monorail and high-speed rail are new concepts for many Egyptians. Our designs need to make these modern systems feel familiar, useful, and exciting.
